SUMMARY

Target role: Junior Software Engineer | Software Engineering Intern

Junior developer with hands-on experience building full-stack web systems (React, Next.js, TypeScript and Supabase/PostgreSQL), application security and process automation with n8n and REST APIs. Looking to contribute to engineering teams that build products at scale while deepening my back-end (Java) and cloud (AWS) skills.

EXPERIENCE

Junior Developer | Grupo Sing Jun 2026 – Present

- Build a modular internal management system (ERP) covering the company's sales, operations and finance cycles.
- Implemented four layers of data security: protected routes, authentication, authorization and Row Level Security (RLS) on PostgreSQL.
- Integrated the system via API with the RD Station CRM and Meta Ads, centralizing sales data intake and improving lead tracking.
- Stack: Next.js (App Router, Server Actions), React, TypeScript, Supabase and PostgreSQL.

Technical Analyst | Capim Solar 2025

- Worked across technical and operational processes at a company that received the 2025 Business Excellence Award in the solar energy segment.
- Managed and submitted complex technical documentation, including review requests for solar micro-generation projects with the power utility (e.g., a project for educational institutions).

SELECTED PROJECTS

Process automation with n8n Independent project

Integration workflows between services and APIs (webhooks, REST) for automated messaging and real-time lead synchronization, eliminating manual work.

Back-end and cloud — Java & AWS Independent project

Service logic and cloud architecture: microservice concepts, API consumption and provisioning of basic resources on AWS, with a focus on scalability.

Personal portfolio — henrique-valois.vercel.app 2026

Bilingual (PT/EN) website built without frameworks — HTML, CSS and JavaScript — with a Content Security Policy, an accessibility focus and deployment on Vercel.

EDUCATION

Associate Degree in Systems Analysis and Development — AGES (Brazil) In progress

2nd semester — Expected graduation: 2028

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, SQL, Java (fundamentals)
Front-end	React, Next.js (App Router, Server Actions), HTML, CSS
Back-end & data	Supabase, PostgreSQL, database modeling, REST APIs (consuming and building), Webhooks
Security	Multi-layer authentication and authorization, Row Level Security (RLS), protected routes
Automation	n8n, RD Station and Meta Ads integrations, applied AI in automations (LLMs via API)
Cloud & tools	AWS (fundamentals), Git, GitHub, Vercel, Agile practices

LANGUAGES

Portuguese — native | **English** — intermediate

SOFT SKILLS

- **Problem solving:** from diagnosis to delivery, picking up new technologies quickly (Next.js, n8n, Java, AWS).
- **Technical communication:** documenting and submitting engineering projects to the power utility.
- **Business awareness:** connecting technology, marketing and sales (CRM and paid media).
