SUMMARY

Target role: Junior Java Back-end Developer | Software Engineering Intern

Junior developer focused on Java back-end, object-oriented programming, data structures and algorithms. Experience on an ERP in production: data modeling on PostgreSQL, multi-layer security, integrations through REST APIs and n8n automations. Looking for engineering teams that build systems at scale.

EXPERIENCE

Junior Developer | Grupo Sing Jun 2026 – Present

- Build a modular ERP covering the company's sales, operations and finance cycles.
- Implemented four layers of data security: protected routes, authentication, authorization and Row Level Security (RLS) on PostgreSQL.
- Integrated the system through REST APIs with the RD Station CRM and Meta Ads, centralizing sales data intake and improving lead tracking.
- Environment: PostgreSQL (Supabase), REST APIs and webhooks; Next.js interface built with the help of AI tools.

Technical Analyst | Capim Solar 2025

- Worked across technical and operational processes at a company that received the 2025 Business Excellence Award in the solar energy segment.
- Managed and submitted complex technical documentation, including review requests for solar micro-generation projects with the power utility (e.g., a project for educational institutions).

SELECTED PROJECTS

Back-end and cloud — Java & AWS Independent project

Service logic in Java and cloud architecture: object-oriented design, microservice concepts, API consumption and provisioning of basic resources on AWS, with a focus on scalability.

Process automation with n8n Independent project

Integration workflows between services and APIs (webhooks, REST) for automated messaging and real-time lead synchronization, eliminating manual work.

Personal portfolio — henrique-valois.vercel.app 2026

Bilingual (PT/EN) website with a Content Security Policy, a build step that versions every asset and continuous deployment on Vercel. Built with AI assistance, under my direction and review.

EDUCATION

Associate Degree in Systems Analysis and Development — AGES (Brazil) In progress

2nd semester — Expected graduation: 2028

TECHNICAL SKILLS

Languages	Java (main language), SQL
Fundamentals	Object-oriented programming, data structures, algorithms, data modeling
Back-end & data	REST APIs (consuming and building), PostgreSQL, webhooks, microservice concepts
Security	Multi-layer authentication and authorization, Row Level Security (RLS), protected routes
Cloud & tools	AWS (fundamentals), Git, GitHub, Vercel, Agile practices
Automation	n8n, RD Station and Meta Ads integrations, applied AI in automations (LLMs via API)
Familiar with	JavaScript, TypeScript, React and Next.js

LANGUAGES

Portuguese — native | **English** — intermediate

SOFT SKILLS

- **Problem solving:** from diagnosis to delivery, picking up new technologies quickly (Java, AWS, n8n).
- **Technical communication:** documenting and submitting engineering projects to the power utility.
- **Business awareness:** connecting technology, marketing and sales (CRM and paid media).
